Telos Corp - TLSRP: Awarded US Army Contract to Install AirDefense's Wireless Intrusion System

By Jay Everitt

Telos(R) Corporation (TLSRP) noted that it has won an expansive contract with the U.S. Army to install AirDefense's wireless intrusion detection/prevention system (WIDS/WIPS) at 20 North American installations.

Under the terms of this contract, Telos will deliver more than 1500 AirDefense sensors on a turnkey basis, including site surveys and project reports for each of the 20 locations as well as installation, testing and onsite training. The AirDefense system will protect the Army's local area networks in addition to its wireless networks from unauthorized access. AirDefense will also prevent potential vulnerabilities by alerting managers of open connections.
