Motorola AirDefense Infrastructure Management Solution

Key features: A powerful wireless LAN (WLAN) management tool designed to help IT departments gain better visibility into their networks and reduce operational costs associated with managing fast-changing, increasingly complex and increasingly pervasive wireless networks. Integrates multi-vendor WLAN infrastructure management, a 24/7 wireless intrusion prevention system with built-in security and compliance reporting, and a full set of network assurance tools designed to remotely troubleshoot user connectivity issues and fix WLAN performance problems from a centralized IT helpdesk.
